

# presence\_id

## presence\_id

**STRING** Will instruct `mod_sofia` to invoke a `PRESENCE_IN` event that will assert the BLF lamp for the subscribed entity. This only lasts while the channel still exists so it should not be used for persistent status (i.e. a user that is DND, or an agent logged into a queue).

### Usage

```
<action application="set" data="presence_id=${dialled_extension}@${domain_name}"/>
```
