

Provider Belcentrale (Netherlands)

Belcentrale.nl

Last update: 17 November 2010

In *conf/directory/default/*(or default) create a file *belcentrale.xml*:

```
<include>
  <gateway name="belcentrale.nl">
    <param name="username" value="31XXXXXXXXX"/>
    <param name="realm" value="sip1.belcentrale.nl"/>
    <param name="password" value="your_password"/>
    <param name="register" value="true"/>
  </gateway>
</include>
```

then in *sip_profiles/nat.xml* (or *default.xml* when not using NAT) edit the setting for *auth_calls* and set to false:

```
<param name="auth-calls" value="false"/>
```

DTMF does not seem to work with RFC2833. Had to set phone to use in-audio DTMF.
