Incoming and Outgoing works.

Add the Level3 Gateway IP into the domain section under autoload_configs/acl.conf.xml

```xml
<configuration name="acl.conf" description="Network Lists">
    <network-lists>
        <list name="domains" default="deny">
            <node type="allow" cidr="4.55.60.x/32"/>
        </list>
    </network-lists>
</configuration>
```

Create Level3 sip profile under sip_profiles/external/

```xml
<include>
    <gateway name="Level3">
        <param name="auth-username" value="1-XXXXXX"/>
        <param name="realm" value="Level3"/>
        <param name="password" value="password"/>
        <param name="extension" value="default"/>
        <param name="proxy" value="4.55.60.x:5070"/>
        <param name="sip-port" value="5060"/>
        <param name="expire-seconds" value="600"/>
        <param name="register" value="false"/>
        <!-- Must be set with one of the TN from the Level3 SIP Trunk -->
        <param name="from-user" value="1234567890"/>
        <param name="extension-in-contact" value="true"/>
        <param name="sip-trace" value="no"/>
    </gateway>
</include>
```

Dialplan Settings - Level3 sends and receives in 10 digit format by default. Inbound dialplan settings (transfer to extension 102):

```xml
<include>
    <extension name="Level3_inbound">
        <condition field="context" data="public"/>
        <!-- The following line detects incoming 10 digit calls to number 1234567890 -->
        <condition field="destination_number" expression="^1234567890$">
            <action application="transfer" data="102 XML default"/>
        </condition>
    </extension>
</include>
```

Outbound dialplan settings (dial 9 then ten digits):
In order to be able to send and receive fax, the following must be included in the dialplan:

```xml
<action application="export" data="t38_passthru=true"/>
```
