

Session setHangupHook

About

Sets the hangup callback handler function that will get called when the call terminates.

Remember to call `exit()` if you want to terminate the javascript session in your hangup callback handler.

Usage

```
result = session.setHangupHook(hangup_function_name);
```

NOTE: You **MUST** declare the hang-up function *BEFORE* you call the above line, otherwise your hangup hook will not be fired.
